Value standardization

# Value standardization

- ≡ Consistent values not only within a dataset, but across datasets
- ≡ Values can be standardized using a controlled vocabulary, or by using a specific format or data type

language	
Identifier	<a href="http://purl.org/dc/elements/1.1/language">http://purl.org/dc/elements/1.1/language</a>
Definition	A language of the resource.
Comments	Recommended best practice is to use a controlled vocabulary such as RFC 5646.
Examples	<a href="#">en</a> (for English) <a href="#">es</a> (for Spanish)
eventDate	
Identifier	<a href="http://rs.tdwg.org/dwc/terms/eventDate">http://rs.tdwg.org/dwc/terms/eventDate</a>
Definition	The date-time or interval during which a dwc:Event occurred. For occurrences, this is the date-time when the dwc:Event was recorded. Not suitable for a time in a geological context.
Comments	Recommended best practice is to use a date that conforms to ISO 8601-1:2019.

month	
Identifier	<a href="http://rs.tdwg.org/dwc/terms/month">http://rs.tdwg.org/dwc/terms/month</a>
Definition	The integer month in which the dwc:Event occurred.
Comments	
Examples	<a href="#">1</a> (January) <a href="#">10</a> (October)

# Value standardization

- ≡ Consistent values not only within a dataset, but across datasets
- ≡ Values can be standardized using a controlled vocabulary, or by using a specific format or data type
- ≡ In some cases values can be standardized by adding an ID from a controlled vocabulary for that value in a separate column

## scientificNameID

Identifier <http://rs.tdwg.org/dwc/terms/scientificNameID>

Definition An identifier for the nomenclatural (not taxonomic) details of a scientific name.

Comments

Examples <urn:lsid:ipni.org:names:37829-1:1.3>

## higherGeographyID

Identifier <http://rs.tdwg.org/dwc/terms/higherGeographyID>

Definition An identifier for the geographic region within which the dcterms:Location occurred.

Comments Recommended best practice is to use a persistent identifier from a controlled vocabulary such as the Getty Thesaurus of Geographic Names.

Examples <http://vocab.getty.edu/tgn/1002002> (Antártida e Islas del Atlántico Sur, Territorio Nacional de la Tierra del Fuego, Argentina).

# Value standardization

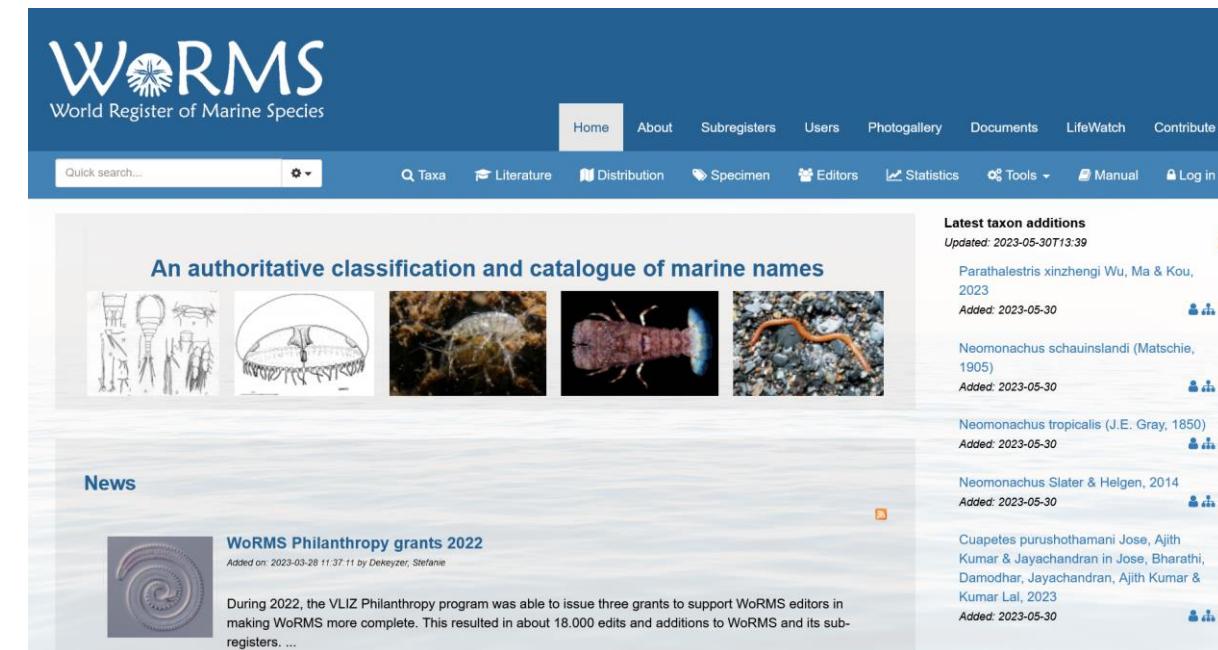

- ≡ How to standardize depends on the field
  - ≡ General recommendations: check DwC terms definitions and comments
  - ≡ More specific recommendations: repository (e.g. OBIS, EMODnet Biology)
- ≡ Let's look into more detail into:
  - ≡ Taxonomy
  - ≡ Geography
  - ≡ Time

# Value standardization

- ≈ How to standardize depends on the field
- ≈ Let's look into more detail into:
  - ≈ **Taxonomy**
  - ≈ Geography
  - ≈ Time

# Taxonomic standardization

- ≡ Match names to an authoritative taxonomic register
- ≡ Taxonomic backbone of OBIS:

News

**WoRMS Philanthropy grants 2022**  
Added on: 2023-03-28 11:37:11 by Dekeyzer, Stefanie

During 2022, the VLIZ Philanthropy program was able to issue three grants to support WoRMS editors in making WoRMS more complete. This resulted in about 18.000 edits and additions to WoRMS and its sub-registers. ...

# Taxonomic standardization

- ≡ Match names to an authoritative taxonomic register
- ≡ → Attach unique stable identifiers
  - ≡ WoRMS LSIDs
- ≡ → Keep up with changing taxonomy
- ≡ → Avoid misspellings

## WoRMS REST webservice 1.0.0 OAS3

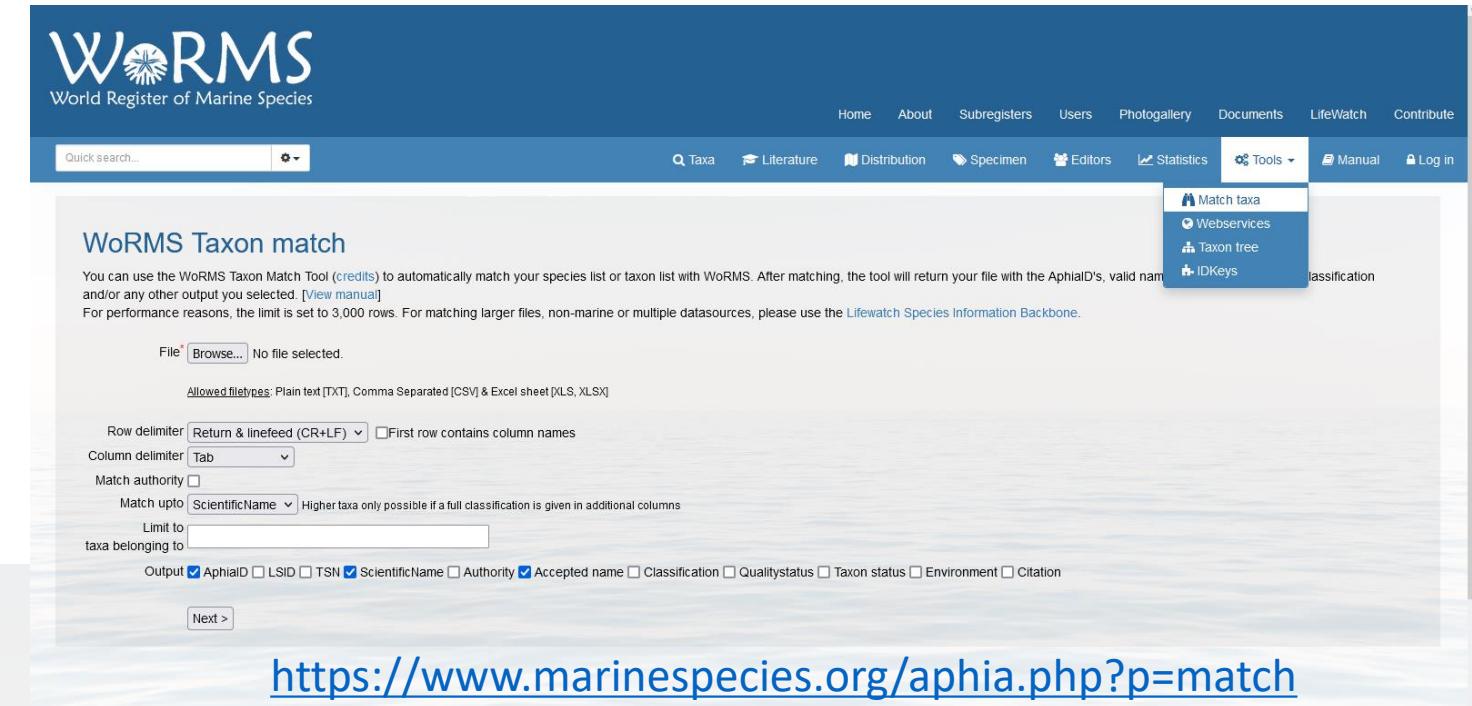

<https://www.marinespecies.org/rest/api-docs/swagger.yaml>

The definitions and operations are listed below. Click on an operation name to view its details, and test it.

GET /AphiaRecordsByMatchNames Try to find AphiaRecords using the TAXAMATCH fuzzy matching algorithm by Tony Rees

For each given scientific name (may include authority), try to find one or more AphiaRecords, using the TAXAMATCH fuzzy matching algorithm by Tony Rees.  
This allows you to (fuzzy) match multiple names in one call. Limited to 50 names at once for performance reasons

<https://www.marinespecies.org/rest/>

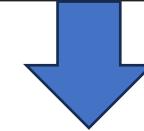

<https://www.marinespecies.org/aphia.php?p=match>

## WoRMS Taxon Match

≡ Taxon match returns not only exact matches, also approximate matches

≡ WoRMS taxon match results:

- ≡ exact: all characters match exactly
- ≡ exact\_subgenus: an exact match, but including the subgenus
- ≡ phonetic: sounds similar as, despite minor differences in spelling (soundex algorithm)
- ≡ near\_1: perfect match, except for one character. This is a quite reliable match.
- ≡ near\_2: good match, except for two characters. This needs an extra check.
- ≡ near\_3: good match, except for three characters. This definitely needs an extra check.
- ≡ match\_quarantine: match with a name that is currently in quarantine. Any name that has been used in the literature should in principle not be quarantined. So best to contact the WoRMS DMT about this.
- ≡ match\_deleted: this is a match with a name that has been deleted and no alternative is available. Please contact the WoRMS DMT when you come across this.
- ≡ No match

≡ → Check and verify everything that is not an exact match...

  - ≈ Taxonomy
  - ≈ **Geography**
  - ≈ Time

# Geographic standardization

## Coordinates

### Different spatial reference systems

#### OBIS:

- Decimal degrees
- EPSG:4326 (WGS84)

#### geodeticDatum

Identifier	<a href="http://rs.tdwg.org/dwc/terms/geodeticDatum">http://rs.tdwg.org/dwc/terms/geodeticDatum</a>
Definition	The ellipsoid, geodetic datum, or spatial reference system (SRS) upon which the geographic coordinates given in dwc:decimalLatitude and dwc:decimalLongitude are based.
Comments	Recommended best practice is to use the EPSG code of the SRS, if known. Otherwise use a controlled vocabulary for the name or code of the geodetic datum, if known. Otherwise use a controlled vocabulary for the name or code of the ellipsoid, if known. If none of these is known, use the value <i>unknown</i> . This term has an equivalent in the dwciri: namespace that allows only an IRI as a value, whereas this term allows for any string literal value.
Examples	<a href="#">EPSG:4326</a> <a href="#">WGS84</a> <a href="#">NAD27</a> <a href="#">Campo Inchauspe</a> <a href="#">European 1950</a> <a href="#">Clarke 1866</a> <a href="#">unknown</a>

# Value standardization

- ≈ How to standardize depends on the field
- ≈ Let's look into more detail into:
  - ≈ Taxonomy
  - ≈ Geography
  - ≈ Time

# Temporal standardization

- ≡ Standard: ISO 8601-1:2019
- ≡ YYYY-MM-DD
- ≡ No timezone specified → local time
  - ≡ If UTC: add a Z at the end
- ≡ Unknown time → do not add time  
(do not use 00:00)

eventDate	
Identifier	<a href="http://rs.tdwg.org/dwc/terms/eventDate">http://rs.tdwg.org/dwc/terms/eventDate</a>
Definition	The date-time or interval during which a dwc:Event occurred. For occurrences, this is the date-time when the dwc:Event was recorded. Not suitable for a time in a geological context.
Comments	Recommended best practice is to use a date that conforms to ISO 8601-1:2019.

## ≡ Examples:

### ≡ Dates:

- ≡ 1948-09-13
- ≡ 1993-01/02
- ≡ 1993-01
- ≡ 1993

### ≡ Dates with Specific Times:

- ≡ 1973-02-28T15:25:00
- ≡ 2008-04-25T09:53

### ≡ Dates with Time Zones:

- ≡ 2005-08-31T12:11+12
- ≡ 2013-02-16T04:28Z

### ≡ Date and Time Intervals:

- ≡ 1993-01-26T04:39+12/1993-01-26T05:48+12

# Value standardization

- ≡ How to standardize depends on the field
- ≡ Let's look into more detail into:
  - ≡ Taxonomy
  - ≡ Geography
  - ≡ Time
- ≡ Measurements

## lifeStage

Identifier <http://rs.tdwg.org/dwc/iri/lifeStage>

Definition The age class or life stage of the dwc:Organism(s) at the time the dwc:Occurrence was recorded.

Comments Recommended best practice is to use a controlled vocabulary. Terms in the dwciri namespace are intended to be used in RDF with non-literal objects.

## individualCount

Identifier <http://rs.tdwg.org/dwc/terms/individualCount>

Definition The number of individuals present at the time of the dwc:Occurrence.

# Measurements standardization

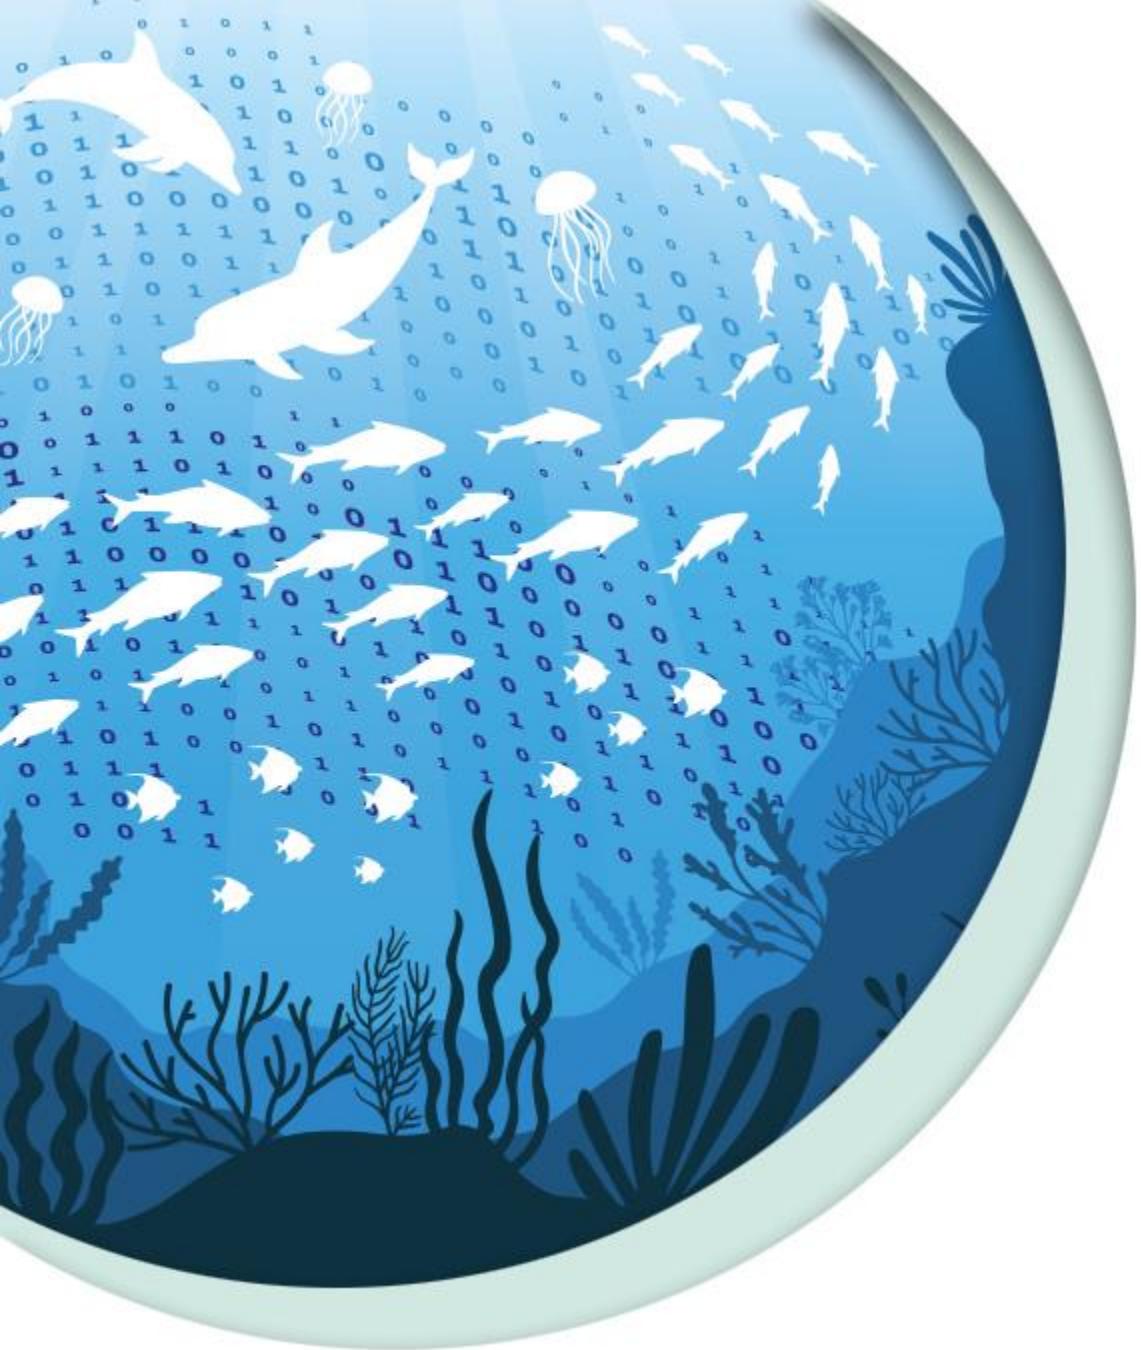

- ≡ Not all measurement types have a corresponding DwC term
- ≡ Solution → eMOF (extendedMeasurementOrFact)
- ≡ BODC NERC vocabulary
  - ≡ Standardise parameter names, units and values
- ≡ Details in the break-out session
