Integration of biodiversity monitoring
data into the Digital Twin Ocean

DTO-BioFlow data training
workshop:

Darwin Core

State of the art: Data is scattered

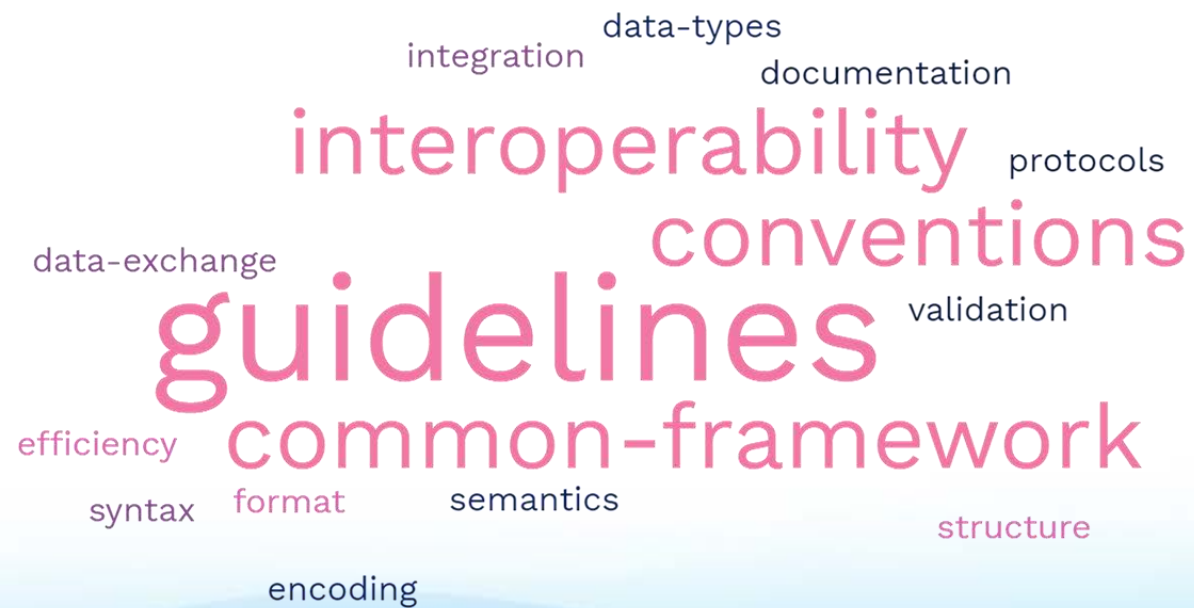

under the current system. Students in PhD programmes spend up to 80% of their time on 'data munging', fixing formatting and minor mistakes to make data suitable for analysis – wasting time and talent. With 400 such students, that would amount to a monetary waste equivalent to the salaries of 200 full-time employees, at minimum. So, hiring 20 professional data stewards to cut time lost to data wrangling would boost effective research capacity. Many top

More than 70% of researchers have tried and failed to reproduce another scientist's experiments, and more than half have failed to reproduce their own experiments. Those are some of the telling figures that emerged from *Nature's* survey of 1,576 researchers who took a brief online questionnaire on reproducibility in research.

FAIR data: Data standards

“Set of guidelines or rules that specify how data should be structured, formatted, and represented to ensure consistency, interoperability, and efficient data exchange”

FAIR data: Data standards

Name	Phone	Birth date	Country
John Smith	445-881-4478	August 12, 1989	Belgium
Fitch, Marie	(876)546-8165	June 15, 72	US
Deere, Alan	+1-189-456-4513	11/12/1965	USA

Name	Phone	Birth date	Country
John Smith	445-881-4478	1989-08-12	Belgium
Marie Fitch	876-546-8165	1972-06-15	USA
Alan Deere	189-456-4513	1965-11-12	USA

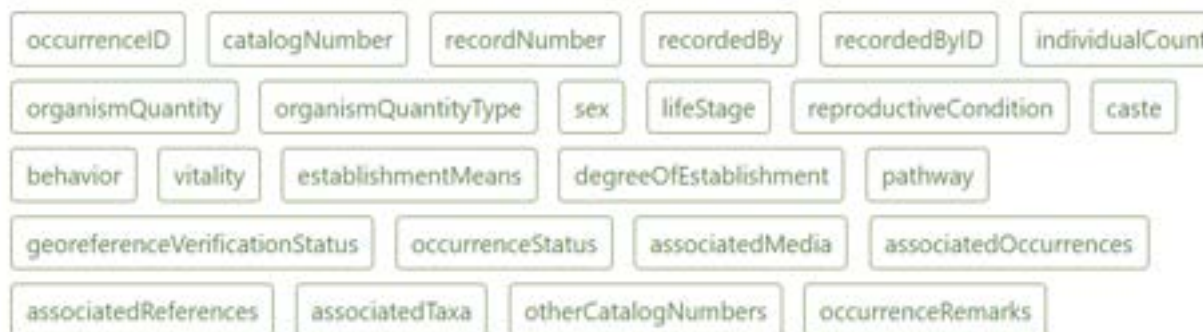

Darwin Core: The scope

Darwin Core is a standard maintained by the Darwin Core Maintenance Interest Group. It includes a glossary of terms (in other contexts these might be called properties, elements, fields, columns, attributes, or concepts) intended to **facilitate the sharing of information about biological diversity** by providing identifiers, labels, and definitions. Darwin Core is primarily based on taxa, their occurrence in nature as documented by observations, specimens, samples, and related information.

Darwin Core: The terms

List of terms

- Standardized
- Maintained

basisOfRecord

Identifier	http://rs.tdwg.org/dwc/terms/basisOfRecord
Definition	The specific nature of the data record.
Comments	Recommended best practice is to use a controlled vocabulary such as the set of local names of the identifiers for classes in Darwin Core.
Examples	<p>MaterialEntity</p> <hr/> <p>PreservedSpecimen</p> <hr/> <p>FossilSpecimen</p>

Darwin Core: The concepts

≡ Event

≡ Occurrence

≡ Measurement or Fact

Darwin Core: The concepts

Event:

An **action** that occurs at a particular **place** and **time**.

Madeira (route)

Madeira_Cruise-001

Transect-01

Position_0001-0003

Position_0004-0007

Madeira_Cruise-002

Transect-01

Position_0008-0032

Position_0033-0035

Event

Class

Identifier <http://rs.tdwg.org/dwc/terms/Event>

Definition An action that occurs at some location during some time.

Comments

Examples *a specimen collecting event*

a camera trap image capture

a marine trawl

Darwin Core: The concepts

≡ Occurrence:

An existence of an **organism** (or **homogeneous group of organisms**) at a particular **place** and **time**.

Occurrence

Class

Identifier <http://rs.tdwg.org/dwc/terms/Occurrence>

Definition An existence of a dwc:Organism at a particular place at a particular time.

Comments

Examples
a wolf pack on the shore of Kluane Lake in 1988

a virus in a plant leaf in the New York Botanical Garden at 15:29 on 2014-10-23

a fungus in Central Park in the summer of 1929

Darwin Core: The concepts

≡ Measurement or Fact:

A known **characteristic** of something.

MeasurementOrFact

Class

Identifier	http://rs.tdwg.org/dwc/terms/MeasurementOrFact
Definition	A measurement of or fact about an <code>rdfs:Resource</code> (http://www.w3.org/2000/01/rdf-schema#Resource).
Comments	Resources can be thought of as identifiable records or instances of classes and may include, but need not be limited to instances of <code>dwc:Occurrence</code> , <code>dwc:Organism</code> , <code>dwc:MaterialEntity</code> , <code>dwc:Event</code> , <code>dcterms:Location</code> , <code>dwc:GeologicalContext</code> , <code>dwc:Identification</code> , or <code>dwc:Taxon</code> .
Examples	<p>the weight of a <code>dwc:Organism</code> in grams</p> <p>the number of placental scars</p> <p>surface water temperature in Celsius</p>

Darwin Core: The concepts

≡ Measurements: Quantitative

- ≡ Water temperature
- ≡ Duration of net tow
- ≡ Length of the organism

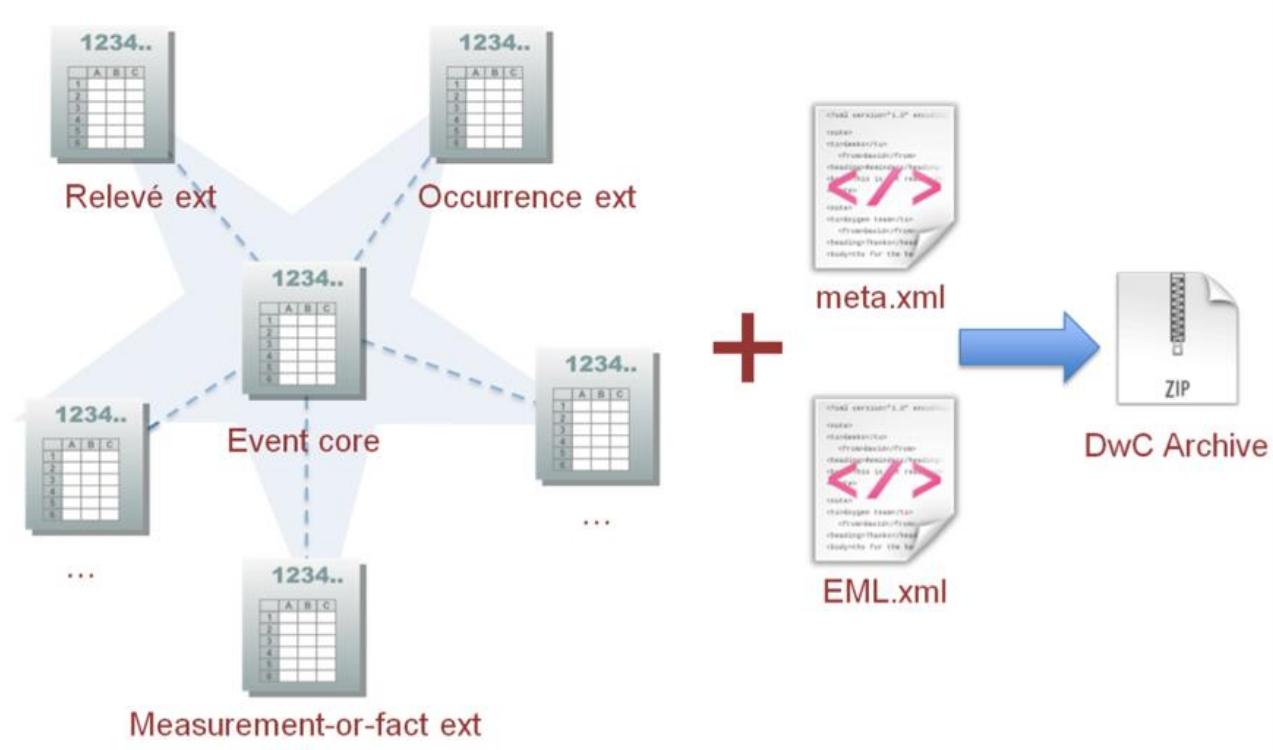

≡ Facts: Qualitative

- ≡ Habitat type
- ≡ Sampling instrument name
- ≡ Life stage of the organism

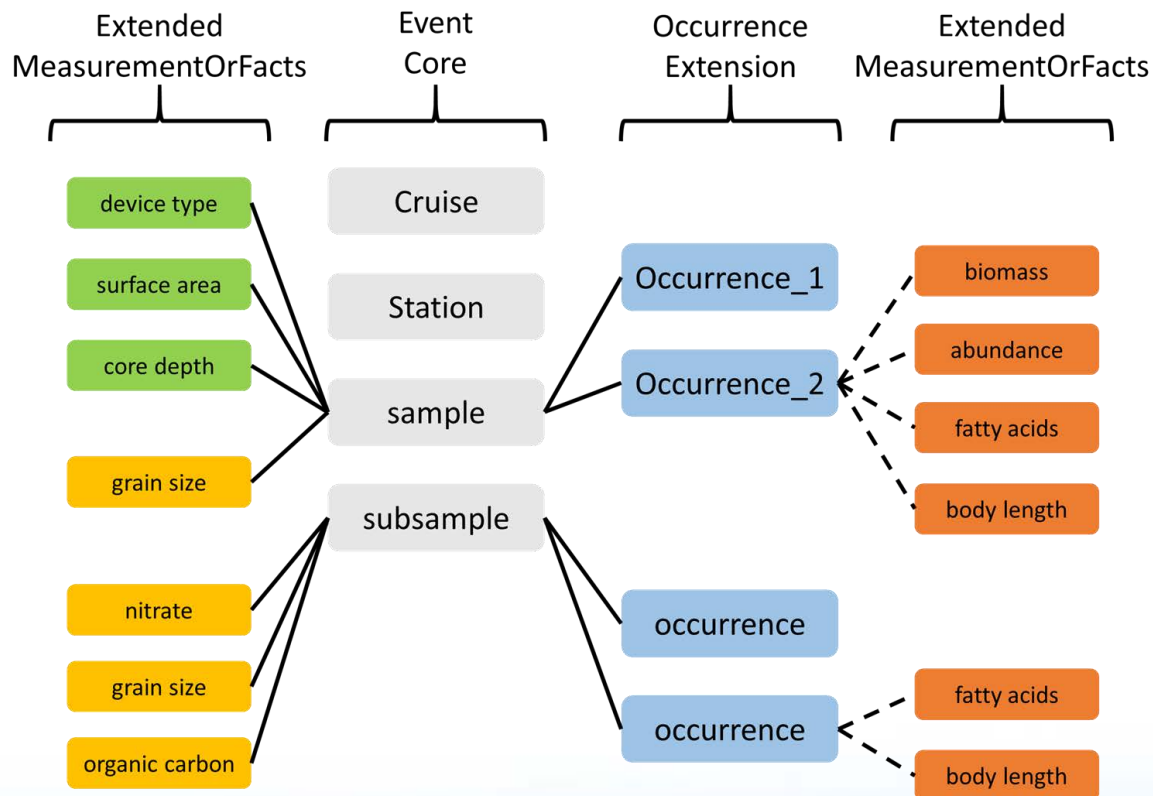

Darwin Core Archives: The data package
